

January 2025

Hi, my name is Brendan Erhard and for my next career challenge, I am looking to apply Artificial Intelligence to investment management.

I am currently an analyst on a successful \$4 billion global technology fund, but I continue to be very enthusiastic about using AI to transform the investment management industry.

As a technology investor I have had a front-row seat to the explosion of AI and Large Language Model technology (LLM). I am a Tier 4 OpenAI developer (based on model usage and tenure), and have built and deployed several AI/LLM investment projects, both internally at my current organization, as well as on my own.

I do have an AI investing project portfolio, which can be found here: <https://bme-ai-investing.vercel.app/>. I want to point out that I completed all of this on nights and weekends, in addition to having a full-time job as an equity analyst.

Examples of projects include an investment co-pilot that enables user to ask anything about big tech companies (<https://investment-copilot-eight.vercel.app/>), as well as an LLM-investment blog (<https://investment-llm.vercel.app/>), and a 50-page slide deck with ideas about how to apply generative AI to transform the investment management industry (<https://bme-ai-investing.vercel.app/slides>),

Finally, I turned my resume into an AI powered chatbot. Users can ask anything about my background, projects, technology skills, and career aspirations (<https://llm-resume-bme.vercel.app/>).

I also have a very active GitHub profile as well hosting more of my projects (<https://github.com/bme3412>).

Thank you very much for the opportunity, please do not hesitate to reach out.

Respectfully,

Brendan Erhard
